

Region ist1 · Istanbul · launching 2027

The developer cloud for Türkiye — built for humans and AI agents.

Servers in Istanbul in 60 seconds. Hourly billing in ₺ or \$, e-Fatura, data that stays in Türkiye — and API tokens your agents can use with a spend cap and a human in the loop.

Start with ₺4,000 credit

See how agents deploy →

```
$ pgcloud servers create --name web-1 --size s-2vcpu-4gb --image wordpress
→ 202 Accepted · id srv_9f1c · region ist1

$ pgcloud servers get srv_9f1c --watch
status: provisioning ip: 185.0.113.42

# or let your agent do it — with a cap
$ claude mcp add pgcloud --token pgc_... # spend cap ₺500/mo, delete needs approval
```

60 s

to a running server

₺160 / mo

entry server, hourly

0

data outside Türkiye

🇹🇷 Istanbul region

Low latency for TR, MENA and the Caucasus

₺ TRY or USD billing

e-Fatura / e-Arşiv, lyzico, cards

🔒 KVKK residency

Data of Turkish customers never leaves Türkiye

🕒 Hourly, capped monthly

Pay for 3 hours, not 30 days

PRODUCTS

Everything a developer cloud needs. Nothing that gets in the way.

One API behind the console, the CLI, Terraform and your agents. Every product is a workflow you can watch, not a spinner.

Core Cloud

Available

Servers, public IPs, snapshots, firewalls. VPC, volumes and load balancers next.

ServersSnapshotsPublic IPsFirewalls

Managed Agents

Available

Give Claude, Cursor or n8n a token with a monthly spend cap and approval rules — not the keys to your account.

Agent-safe tokensMCP serverApproval queue

Marketplace

Available

15 one-click apps at launch, from WordPress to Odoo to an AI starter. Progrid apps as premium listings.

WordPressn8nOdooCoolifyOllama + Open WebUI

Inference Engine

Roadmap

One OpenAI-compatible endpoint, billed per token in ₺. Partner models first, our GPUs next.

Inference gatewayGPU servers

Data & Learning

Roadmap

Managed PostgreSQL with pgvector, MySQL, Redis.

Managed databasesCaching

Security

Available

Host-enforced firewalls, SSH keys, 2FA for owners, a full audit log of every API call.

FirewallsAudit log2FA

FOR AI AGENTS

Let your agent deploy. Keep your hand on the budget.

Global clouds give agents the same all-or-nothing tokens humans use. pgcloud tokens carry a monthly spend cap and a list of actions that must wait for a human — enforced by the API, not by a prompt.

- ✓ **Spend cap per token**
A ₺500/month cap means the agent cannot create a ₺960 server. Ever.
- ✓ **Approval for destructive actions**
Delete, resize-down, rebuild park in a queue until you tap approve.
- ✓ **Scoped like a human, capped like a budget**
servers:write without billing:read; project-scoped; expiring.
- ✓ **Native MCP server**
Add pgcloud to Claude Code or Cursor in one line. Every API endpoint becomes a tool.

```
# create a token for your coding agent
POST /v1/tokens

{
  "name": "claude-code",
  "isAgent": true,
  "scopes": ["servers:read", "servers:write"],
  "spendCapMinor": 50000, // ₺500 / month
  "requireApprovalFor": ["servers:delete", "servers:resize-down"]
}

# what the agent sees when it overspends
402 spend_limit_reached
{ "capMinor": 50000, "spentMinor": 36000, "addedMonthlyMinor": 108000 }
```

PRICING

Simple, predictable, in your currency.

Billed by the hour, never more than the monthly price. Bandwidth included. No surprise line items — the price list is an API call: GET /v1/pricing .

TRYUSD

VCPU	MEMORY	NVME / CEPH	TRANSFER	MONTHLY	HOURLY
1	512 MB	10 GB	0.5 TB	₺160,00	₺0,24
1	1 GB	25 GB	1 TB	₺240,00	₺0,36
1	2 GB	50 GB	2 TB	₺480,00	₺0,71
2	4 GB	80 GB	4 TB	₺960,00	₺1,43
4	8 GB	160 GB	5 TB	₺1.920,00	₺2,86
8	16 GB	320 GB	6 TB	₺3.840,00	₺5,71

Prices exclude KDV (20 %) for Turkish customers. Public IP included with every server. Snapshots ₺2.40 / GB-month. Backups 20 % of the plan.

MARKETPLACE

One click from idea to running app.

Every app is a hardened image plus a cloud-init script — built from Git, CVE-scanned, test-deployed before it ships. Bring your own with the vendor program and keep 70 %.
